

First Meeting - (Mam's office)
 "Confirmation of specification"

- Don't go in so much details right now
- Work on what you have overall
- Next phase is more detailed
- Students can register for societies but not for events remove it.
- Near Events are same thing as upcoming events

12-15 ~~30~~ minutes of meeting

→ A student can enroll only in one society.

⇒ We can take help from any AI tool to generate website.

Meeting with Mr. Saleem
 relevant IT Person for
 NUSP

Participants :-

Abubakar

Zaviyar

Sohiya

Sanica

Questions :-

i) University centralized student
 login/authentication used
 for student verification?

ii) Is there any university
 SSO (single sign-on) system?

iii) Can an external website
 authenticate a student

using their university credentials without storing their university password?

4) Is there an API or authentication service that our website could use to verify whether someone is currently enrolled Narmal Student?

5) Can system provide information such as student name, roll number, program, batch/year and university email after authentication

6) Existing student database and can we use it.

7) Would you recommend that we design our database independently or will we integrate with uni system using API

8) Preferred

- Programming language
- Framework

9) technologies that university does not support.

React / Next.js for
Frontend

Node.js and Python
and FastAPI for backend
